Proof of Quality

CHAINS AND SPROCKETS

Uncompromising quality
and perfect service

WIPPERMANN TRADING

Combining uncompromising quality
and service – since 1998

Your benefits at a glance:

- optimum availability of the entire product range
- customization of chains and sprockets
- fast delivery within 24 hours

Wippermann-Trading, or Witra for short, has been our brand for particularly economical standard chains and sprockets within the Wippermann Group since 1998. High availability and fast processing combined with highest quality complete our service.

We offer an extensive range of proven roller chains, leaf chains, hollow pin chains, lumber conveyor chains as well as sprockets and plate sprockets. A strict quality agreement with our suppliers in combination with comprehensive quality controls

ensures a high degree of technical and functional reliability of the various drive components.

Our modern facility in Kirchlengern has been systematically designed to meet the requirements of our customers. Thanks to state-of-the-art machining technology, we can offer individual customization options for sprockets. Shortest response times are made possible by our optimized logistics processes through the efficient integration of administration, picking and dispatch.

INDUSTRIAL CHAINS

Perfectly tuned to your needs

Our services:

- cutting to length
- riveting
- shortening
- assembling chains with attachments
- pre-stretched chains in matched-length

Do you need a chain length different from the usual market length of five metres? Thanks to our modern machinery, we can also assemble and deliver special lengths at short notice: Our automatic cutting machine separates chains quickly and accurately from a 100-metre reel to your required length. In addition, we also offer customized chains with various attachments.

Not all chains are the same: Manufacturing and component tolerances permissible under standards can lead to differences in length for identical models. For certain applications, such as paired running, the chains must have exactly the same length. This is ensured by the use of our in-house measuring and stretching bench, which enables the precise adjustment of the length of our chains.

The following chain types are available in stock:

- Roller chains according to ISO 606 (european type)
- Double pitch chains according to ISO 1275 (european type)
- Roller chains according to ISO 606 (american type)
- Double pitch chains according to ISO 1275 (american type, straight plates)
- Roller chains according to ISO 606 (american type, heavy series)
- Roller chains with straight side plates
- Roller chains made of stainless steel
- Nickel-plated roller chains
- Leaf chains type series LL according to ISO 4347
- Leaf chains type series BL according to ISO 4347
- Roller chains with attachment side plates
- Hollow pin chains
- Roller chains with U-type attachments
- Roller chains with elastomer-profiles
- Lumber conveyor chains

DELIVERY PROGRAM INDUSTRIAL CHAINS

Speed through availability

The delivery within 24 hours is guaranteed by the availability of our products: On an area of 3.000 sqm we stock chains in sizes 04-1 to 56B-3 in our large storage system. This enables us to meet almost all requirements of our customers within the shortest possible time. There is an option to extend the logistics capacity by another 50 %, making our site viable for the future.

Our comprehensive stock range also includes special designs such as Witra roller chains with U-type attachments from ½" to 1" in simplex and duplex. These are particularly suitable for transport goods in the building materials industry. We stock roller chains with elastomer profiles from ½" to ¾" in simplex and duplex and 1" in simplex for the gentle transport of goods with sensitive surfaces like those in the furniture industry. The product range has also been extended to lumber conveyor chains from 1" to 2" in simplex design.

Standard machining

Threaded holes (up to M12)

Pinholes (up to 12 mm)

Grooves according to DIN

Reaming (d)

SPROCKETS AND PLATE SPROCKETS

More than standard

Drilling, grooving, inserting threads or pin holes: Our special customization program for sprockets and plate sprockets is designed to meet your needs. The range includes:

- Witra sprockets for simplex ($\frac{3}{8}$ " - $1\frac{1}{4}$ ") and duplex roller chains ($\frac{3}{8}$ " - 1")
- Witra plate sprockets for simplex roller chains ($\frac{3}{8}$ " - $1\frac{1}{4}$ ")

Our new machining centre offers the flexibility to realize a wide range of individual options for standardized pre-drilled sprockets. Modern CNC machines enable us to implement a wide range of options in a highly precise and timely manner.

PERFECT SERVICE

24h delivery for stock goods

The heart of the Witra site in Kirchlingern is the logistics center: Thanks to modern ERP systems and perfectly coordinated processes, we deliver stock items to your German location within 24 hours.

We can also customize your chains or sprockets quickly and flexibly and deliver the individualized components within a few days.

Test our quality and flexibility: We are 100% dedicated to meeting your requirements in the shortest possible time. Get in touch with us, we look forward to your request.
